

Benefits from EVRIS are driven from the step-change in Decision Support capability that provides optimised scheduling delivered in rapid timeframes. Such high performance scheduling supports the predictive modelling cycles catering for the many and complex daily re-scheduling activity required by the Schedule Practitioner. More detailed discussions of ROI, Enablers and Delivered benefits are provided.

Key Highlights include;

- Capture of Operations and Sequencing constraints, preferences and settings to provide an Intellectual Capital vault for risk mitigation
- Prediction and Execution facts for decision support, from modelling, analysis and performance measurement for closed loop Continuous Improvement
- Capability to challenge and harvest improvement opportunities for capacity and savings benefit
- Making money out of EVRIS and building sustainable competitive advantage

A Whitepaper is available that describes these benefits in more detail, or alternatively, see the Customer Case Studies, all of which can be downloaded under the [“Documents”](#) Link
